PROFILE

AI Engineer specializing in Large Language Models, Generative AI, and production ML systems. I design, fine-tune, and deploy transformer-based models (GPT, T5, BERT) and RAG pipelines for business-critical use cases - document intelligence, conversational assistants, and workflow automation. Proven track record of shipping AI to production with MLOps (Docker, Kubernetes, MLflow) and optimizing models for real-time, low-latency inference. Strong bias for action and a record of AI solutions that drive measurable business impact.

PROFESSIONAL EXPERIENCE

AI Engineer / Data Scientist - Commercial Bank of Qatar, Doha

Jan 2024 - Present

- Shipped production LLM systems (GPT, T5, BERT) for personalization, document summarization, and workflow automation, cutting manual processing across multiple business units by ~60%, by fine-tuning transformer models with Hugging Face Transformers and orchestrating them through LangChain.
- Delivered real-time answers from 900+ unstructured compliance documents at 87% source-linked retrieval accuracy by building a RAG assistant with an embedding + vector-retrieval pipeline (semantic chunking, re-ranking, citation grounding).
- Reduced manual workload 70% and earned the COO Problem Solver Award by building a generative-AI email assistant that auto-classifies and responds to 500+ customer queries weekly (intent classification + LLM-generated drafts).
- Extracted structured data from complex Arabic/English ID and financial documents - cutting document-handling time ~65% - by building 7 OCR + translation pipelines on Azure OCR and transformer models.
- Flagged anomalous transactions and reduced fraud exposure by developing a supervised fraud-detection model (XGBoost, Logistic Regression) with advanced feature engineering, validated via A/B testing and ROC-AUC 0.93, handling severe class imbalance with resampling.
- Eliminated third-party translation spend (~\$120K/yr) by launching an on-prem Arabic<->English document translator that preserves original layout, deployed fully in-house for data privacy.
- Cut production inference latency ~40% and enabled reproducible CI/CD model releases by containerizing and automating LLM deployment with Docker, MLflow, and Kubernetes.

Software Engineer - MeeApps, Istanbul

Feb 2023 - Jan 2024

- Delivered microsecond-level trade execution for 23 brokerage firms managing \$10M+ portfolios by building a high-frequency trading platform and optimizing ITCH, OUCH, and TCP protocols for ultra-low latency.
- Built the full platform - frontend UI, backend services, and live market-data feeds from co-located exchange servers - using React, C#, and C++.
- Owned end-to-end system reliability and latency across the full stack, sustaining 99.9% uptime under live trading load.

Data Scientist - Schneider Electric, Istanbul

Jul 2022 - Dec 2022

- Reduced inventory gaps 12-15% during COVID-related supply shocks by developing and validating demand-forecasting and stock-out-risk models (Random Forest, XGBoost).
- Improved forecast accuracy by engineering features from sales, supply-chain, and distributor data and applying time-series analysis and model tuning.
- Enabled scalable, reproducible deployment by designing evaluation frameworks (cross-validation, holdout testing) and building model pipelines.
- Aligned model outputs with logistics and fulfillment planning by partnering with stakeholders on success metrics; delivered analysis via SQL, Python (pandas, scikit-learn), and Power BI.

EDUCATION

BASc, Electronics Engineering - Sabanci University, Istanbul - 2018 - 2023

Exchange Semester, Electrical & Electronics Engineering - Universitat Politecnica de Valencia (UPV), Spain - 2022

TECHNICAL SKILLS

Generative AI / LLMs: RAG, fine-tuning, prompt engineering, transformers (GPT, BERT, T5), Hugging Face, LangChain, OpenAI APIs, embeddings & vector retrieval

ML / Data Science: Supervised & unsupervised learning, XGBoost, Random Forest, feature engineering, time-series forecasting, statistical analysis & hypothesis testing, A/B testing, model evaluation

MLOps & Deployment: Docker, Kubernetes, MLflow, CI/CD, real-time inference optimization, model serving

Cloud: Azure (OCR, Translation, Custom Models), AWS

Programming: Python (pandas, scikit-learn), SQL; Full-stack (React, C#, C++)

CERTIFICATIONS & COURSES

Machine Learning Specialization (Stanford) | Visa Data Science Bootcamp | TensorFlow in AI/ML/DL (DeepLearning.AI) | Operationalizing LLMs on Azure (Duke) | Generative AI Applications with RAG & LangChain (IBM) | AI Agents (IBM) | Generative AI Techniques & Applications (Duke) | Deep Learning for Sequences & Time Series (DeepLearning.AI) | Supervised/Unsupervised Learning with scikit-learn (DataCamp)
