DINC CETINTAS

AI ENGINEER

EU Citizen, Cyprus | dinccetintas24@gmail.com | +974 51444964 | LinkedIn | GitHub

PROFILE

AI Engineer who owns production AI platforms end-to-end - from architecture and evaluation to deployment, observability, and continuous improvement - in regulated financial environments. I ship reliable, auditable, low-latency LLM and RAG systems used across 7+ business teams and 200+ internal users, combining software engineering, MLOps, and GenAI to turn mission-critical banking workflows into measurable gains in cost, speed, and risk reduction.

PROFESSIONAL EXPERIENCE

AI Engineer - Commercial Bank of Qatar, Doha *Jan 2024 - Present*

- Built a reusable AI platform - a shared retrieval/embeddings service, a shared evaluation framework, and a common model-serving API - that multiple teams consumed to ship production AI applications across 7+ business teams and 200+ users, cutting time-to-delivery for each new app.
- Chose hybrid retrieval (BM25 + vector) with reranking after semantic-only search missed exact regulatory and financial terminology, surfacing authoritative, citation-grounded passages for compliance and reaching 87% source-linked retrieval accuracy over 900+ documents.
- Eliminated unsupported model outputs caught in pre-release testing via citation-grounded generation and retrieval-quality gates, then added post-deployment monitoring and feedback loops that detect retrieval regressions and hallucinations and feed them back into evaluation.
- Defined architectural, evaluation, and release standards for the production AI I built - automated benchmarks (retrieval quality, grounding, hallucination), schema-validated structured outputs, prompt versioning, human review loops, and auditability enforced before every deployment.
- Owned the FastAPI/REST serving layer with model routing, fallback strategies, and context engineering (context-window budgeting and compaction for long documents), cutting inference latency ~40% through optimized retrieval and containerized serving (Docker, Kubernetes, MLflow) with production monitoring.
- Developed production AI workflows for credit-risk and financial analysis that retrieve source data, call internal tools, reason with an LLM, and validate every output against a JSON schema to produce structured, analyst-ready reports.
- Built an AI email & inquiry assistant handling 500+ requests/week with schema-validated structured outputs, cutting manual workload 70% and earning the COO Problem Solver Award.
- Designed and deployed a real-time fraud-detection service integrating engineered risk features, model evaluation, and monitoring, achieving ROC-AUC 0.93 while strengthening transaction-risk controls.
- Partnered with risk, compliance, and business stakeholders to define requirements, align on success metrics, and drive adoption of production AI systems across multiple teams.

Software Engineer - MeeApps, Istanbul *Feb 2023 - Jan 2024*

- Built a low-latency order-execution platform - including smart order-routing and execution algorithms - adopted by 23 brokerage firms managing $10M+ in portfolios, achieving microsecond-level execution.
- Engineered the ultra-low-latency execution path by optimizing ITCH, OUCH, and TCP protocols against co-located exchange servers, and built the full production stack (React/C#/C++ frontend, backend services, and live market-data feeds).
- Owned end-to-end system performance and reliability, sustaining 99.9% uptime under live trading load.

Machine Learning Engineer - Schneider Electric, Istanbul *Jul 2022 - Dec 2022*

- Built and deployed demand-forecasting and stock-out-risk models that reduced inventory gaps 12-15% during COVID supply shocks, directly improving fulfillment reliability.
- Engineered features from sales, supply-chain, and distributor data and built reproducible model pipelines with rigorous evaluation (cross-validation, holdout testing) for scalable deployment.
- Partnered with logistics stakeholders to define success metrics and operationalize forecasts into fulfillment planning.

EDUCATION

BASc, Electronics Engineering - Sabanci University, Istanbul - 2018 - 2023

Exchange Semester, Electrical & Electronics Engineering - Universitat Politecnica de Valencia (UPV),

Spain - 2022

TECHNICAL SKILLS

AI Systems / GenAI: LLM systems, RAG (hybrid BM25+vector, reranking, citation grounding), tool / function calling, structured outputs & JSON-schema validation, prompt versioning, context engineering, agentic workflows

AI Engineering / LLMOps: Automated evaluation (retrieval quality, grounding, hallucination mitigation), human review loops, monitoring & feedback loops, model routing & fallback strategies, latency optimization, reliability engineering

Regulated AI: Auditability, traceability, explainability, compliance & release governance

Production / Platform: FastAPI / REST APIs, backend & service architecture, model serving, Docker, Kubernetes, MLflow, monitoring

ML Foundations: Supervised & unsupervised learning, feature engineering, time-series forecasting, A/B testing

Cloud & Languages: Azure, AWS, SQL | Python; full-stack (React, C#, C++)

SELECTED AI SYSTEMS

- Enterprise RAG Platform - 900+ compliance documents; auditable, source-linked answers at 87% accuracy

- AI Email / Inquiry Assistant - 500+ requests/week automated; 70% manual-load reduction

- Credit Risk Report Generation Platform - agentic generation of analyst-ready credit-risk reports

- Financial Analysis Agent Workflows - multi-step LLM reasoning + tool calling over financial data

- OCR & Document Intelligence Platform - 7 extraction flows for Arabic/English ID & financial docs; ~65% faster, traceable

- Arabic<->English Translation Platform - on-prem, layout-preserving, data-resident; ~$120K/yr third-party spend eliminated

CERTIFICATIONS & COURSES

Operationalizing LLMs on Azure (Duke) | Generative AI Applications with RAG & LangChain (IBM) | AI Agents (IBM) | Generative AI Techniques & Applications (Duke) | Machine Learning Specialization (Stanford) | TensorFlow in AI/ML/DL (DeepLearning.AI) | Deep Learning for Sequences & Time Series (DeepLearning.AI) | Visa Data Science Bootcamp

ADDITIONAL

Languages: English (professional)
